Play through the story Source : ██████████ Q: Show/Hide multiple DIVs on the same page when click on link I have page with horizontal scrolling and about 80 table rows in each section. When I click on one of the links it changes the background of the body and shows the section on which the link is. I'm trying to do something similar with one of my sections. When I click on the link it should scroll down and show a group of DIVs. I have DIVs with same class names. What I tried to do was change the section class to a class with one of the DIVs class names with JS, but it didn't work. Also tried to put that same section with another class (same DIVs with class name) and it worked but then nothing appears (no content for that section), so I think that's not the way to go. How can I change the DIVs class when I click on the link and what is the best/recommended way to do that? Thank you! A: You can change the className attribute of the div. ... You can change the css of the same div .classname { ... } Fallout: New Vegas - Don't Tread On Me Truth or Consequences in the wild-lands Make no mistake, Fallout: New Vegas is an extremely linear video game. The game was intended to have a more grandiose and open-ended gameplay experience. Make no mistake, Bethesda has made two post-apocalyptic games before New Vegas. As such, the setting and design of Fallout: New Vegas is not uncommon for a post-apocalyptic setting. However, the game makes a specific point that the immediate

Download: Explore the Lands Between!!! This article is going to be short and sweet since I have to fill a gap, but I find I can say the most interesting things about sexuality in video games with a little explanation. First of all, I would like to apologise to anyone that has been watching my Youtube videos lately since there won't be one until a few days from now. Today's topic is particularly interesting to me so I hope you won't mind being treated to the juicy details. In AA I believe there is something called Hysteria. Hysteria can affect multiple players in a multiplayer game and take the form of extreme aggression against other players. The only person aware that it is Hysteria at the time is the person that caused it since Hysteria doesn't affect the recipient of the aggression. However after the person afflicted realizes what has happened and where Hysteria originates it may not be possible for them to control their body properly due to the fact that they can't keep the information inside anymore. At that point the Hysteria spread and will eventually require the entire team to take part in the battle in order to successfully return to playable status. So, as of right now all I can say about it is that I have an exclusive tid
